Using L^AT_EX Package `overpic`

Thursday, February 26, 2325

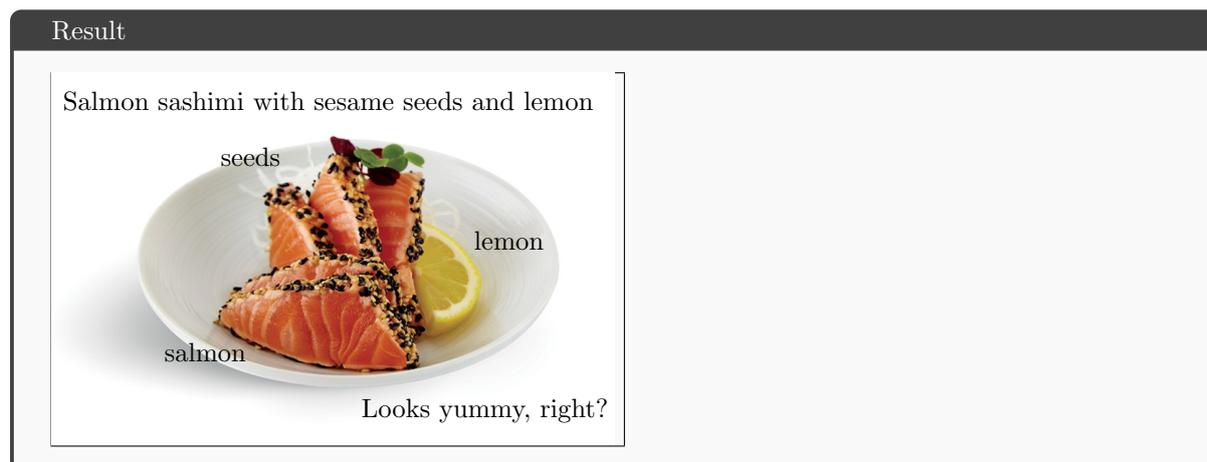

Contents

Where's the code?	1
How do I overlay text onto an image?	2
How do I superimpose a grid for easy alignment?	2
How do I draw circles, lines and polygons over an image?	2
How do I superimpose images over an image?	3
How do I use this to compare multiple images in a figure?	3
What else can I do with overpic?	4

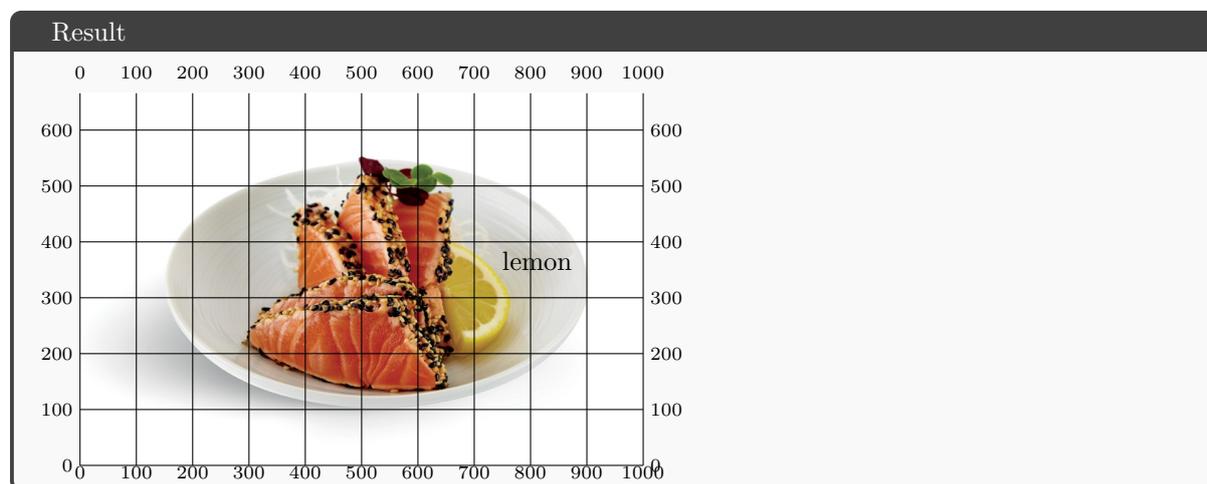

Where's the code?

Instead of textualizing the L^AT_EX in this document, as was done originally (and which was difficult to copy and paste), it is recommended that you just inspect the code directly. If you found this template on [Overleaf](#), you can see the code already in the editor. If you happened upon this example as a document, the [code is in this repository](#). Please feel free to steal anything that helps you :).

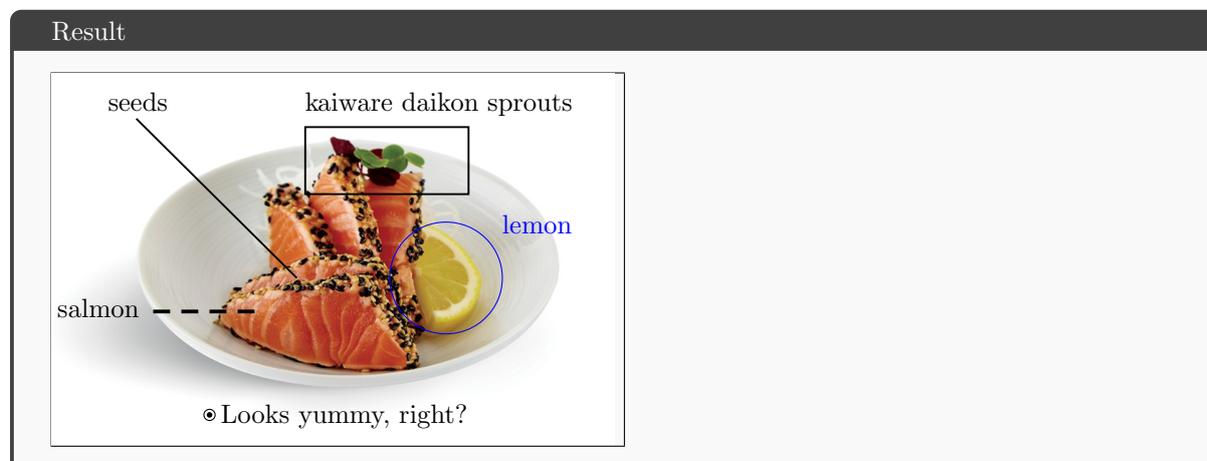

How do I overlay text onto an image?

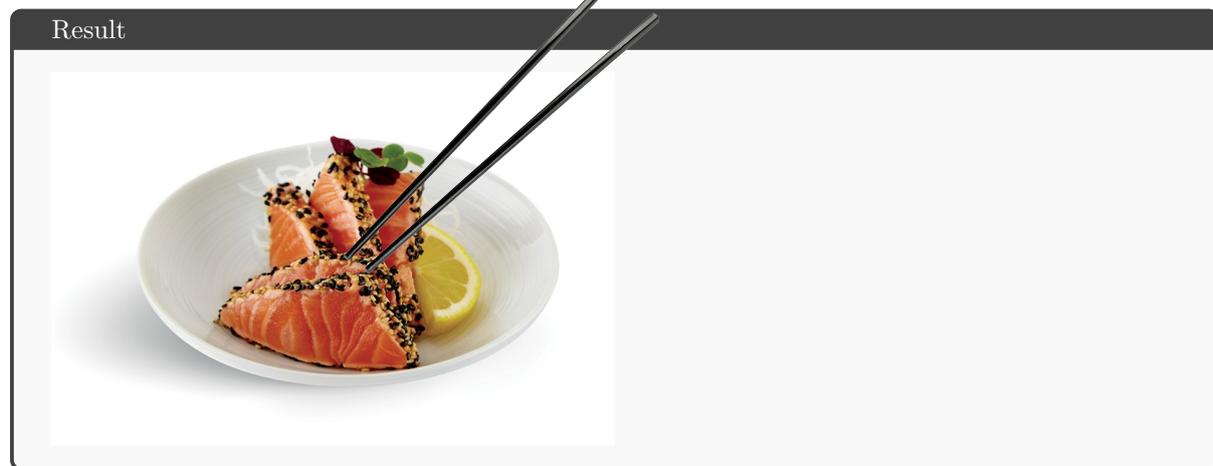

How do I superimpose a grid for easy alignment?

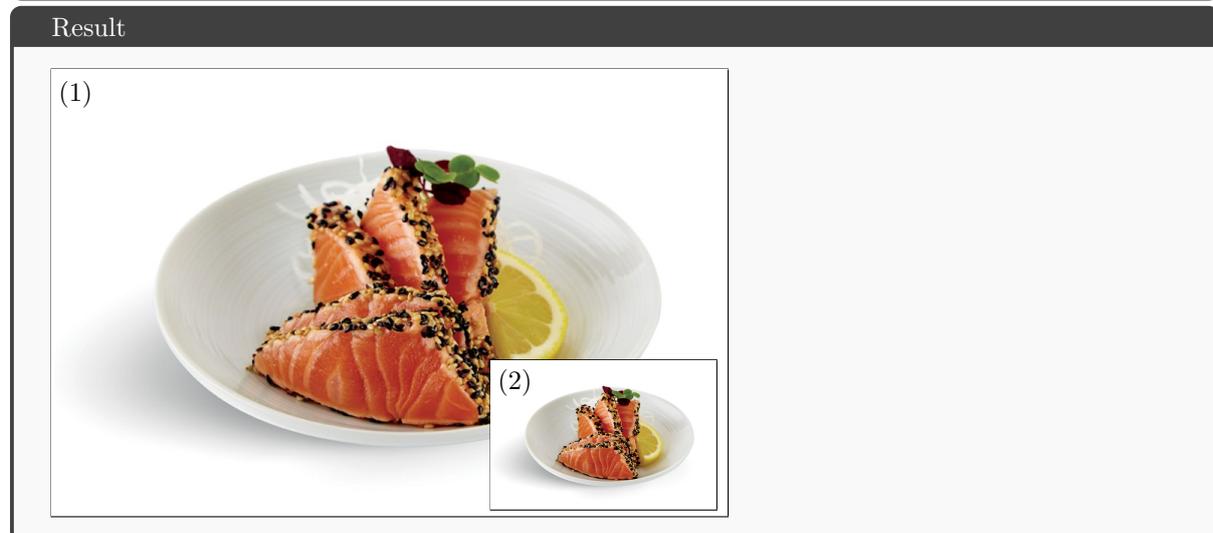

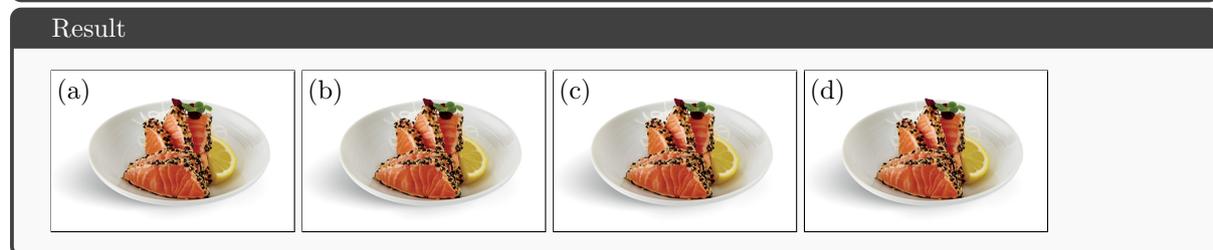

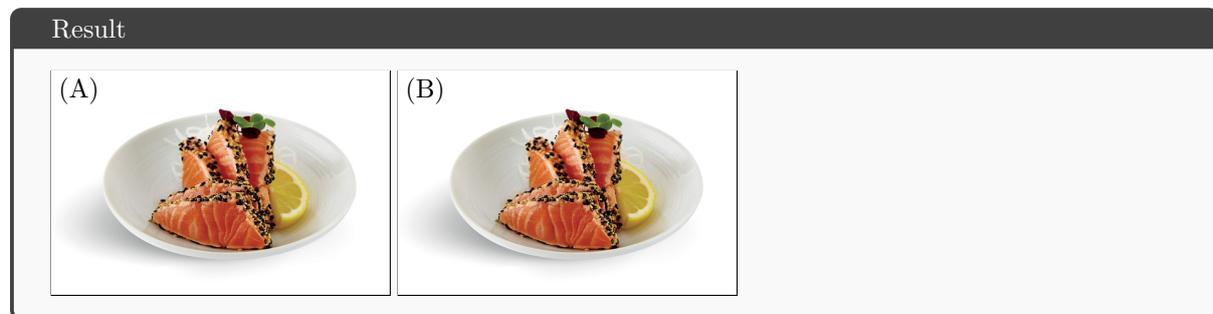

How do I draw circles, lines and polygons over an image?

How do I superimpose images over an image?

How do I use this to compare multiple images in a figure?

What else can I do with `overpic`?

Answer

Here is another 1-page primer by Rolf Niepraschk to get you started:

<http://www.ctex.org/documents/packages/graphics/opic-rel.pdf>

Here is the official documentation on CTAN:

<http://mirrors.ibiblio.org/CTAN/macros/latex/contrib/overpic/overpic.pdf>

Here is a relevant thread on the TeX StackExchange:

<https://tex.stackexchange.com/questions/20792/how-to-superimpose-latex-on-a-picture>

You can also use TikZ, but it is more complicated:

<https://tex.stackexchange.com/questions/9559/drawing-on-an-image-with-tikz>
