## 1 Introduction

This is a test sentence.  
  This is another one.

### 1.1 test

Powered by the  $\text{\LaTeX}$  Ninja.  
*makes text italic*, a similar but different effect is achieved with *which highlights*. Make some **bold** statements and don't forget the "quotes".

will cause a manual pagebreak. Now copy this sentence into your test document.

```
@Article{CiteKey,  
author = {Max Mustermann and Marie Musterfrau},  
title = {Important Findings on Fast Typing in \LaTeX{}},  
journal = {The LaTeX Ninja Blog},  
year = {2019},  
volume = {1},  
number = {3},  
pages = {22--23},  
url = {https://latex-ninja.com}  
}
```

`\emph{}` is used for highlighting.

`some code` always looks cooler in a typewriter font. AUTHORS really love it when their names are set in small caps.

*I just wanted to add that sometimes people have stuff* so incredibly important to say that they want multiple layers of highlighting possible. Thank God, unlike *textit*, `\emph{}` is totally up for the job.

- used to note down some stuff using bullet points → very practical
  - additional item
1. note down stuff in ordered form
  2. use the `enumerate` environment

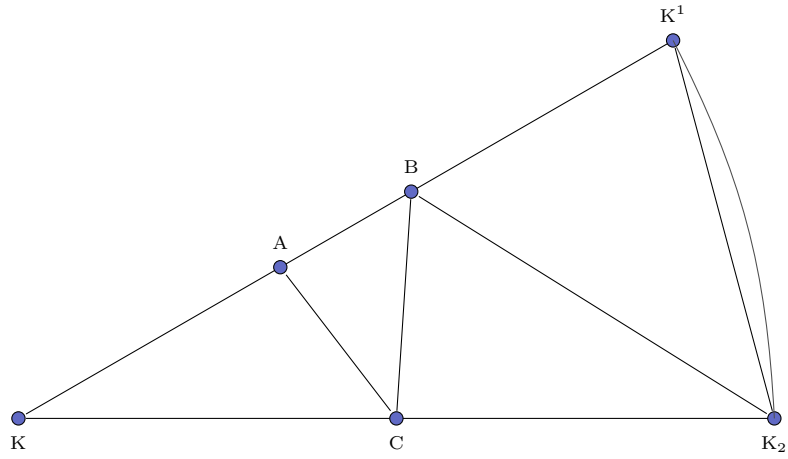

Figure 1: a sketch

## 2 In case you need TikZ

### 3 Tables, graphics, etc.

Satz von der Winkelsumme in der euklidischen Geometrie

Liegt das Polygon in einer euklidischen Ebene, ist die Winkelsumme durch die Formel

$$(n \cdot 180^\circ) - 360^\circ = (n - 2) \cdot 180^\circ$$

gegeben, wobei  $n$  für die Zahl der Ecken des Polygons steht.

Like shown in 1,  $\text{\LaTeX}$  is really cool.<sup>1</sup>

---

<sup>1</sup>cf. 1, pp. 33–55.

## 4 Feel free to add stuff according to your own needs
