

## Manuscript Title

Firstname Lastname<sup>1</sup>, Secondname Lastname<sup>2\*</sup>, Thirdname Namelast<sup>3</sup> and Fourthname Namelast<sup>3</sup>

<sup>1</sup>University 1, Third Av. 104, Sector Z, Building B, 3<sup>o</sup> P, Sala 2222, Country C, ZIP 01452-997,

<sup>2</sup>University 2 of 6, Province VII, Country X, ZIP 99-66555/4.,

<sup>3</sup>The Third Institute, Somecountry, etc.

\*Corresponding author: [second@univ.edu](mailto:second@univ.edu)

### ABSTRACT

Abstract should be limited to up to 300 words and it should give a complete understanding of the manuscript, including the main objective(s) or hypothesis/hypotheses, summarized methods, key results and final or concluding remarks. Do not use subheadings in the abstract body (such as “objective” or “results”). Do not cite references.

**Keywords:** Keyword1, keyword 2, keyword 3 (Limit to 5 keywords representing the main content of the article).

### USING THIS TEMPLATE

This L<sup>A</sup>T<sub>E</sub>X template is a general guideline of the complete Instructions for Authors of the Ocean and Coastal Research (OCR) journal. The manuscript sections below are given for Original Articles. Other manuscript formats such as Review Articles may have a more flexible structure. In the case of Brief Communications, all

Submitted: 29-October-2022

Editor: Rubens Mendes Lopes

Associate Editor: Ronaldo Balofelli

Confidential Manuscript Under Review, Do Not Distribute.

19 sections below should appear in sequence, without subsections and subsubsections. For details, please  
20 refer to our webpage (Instruction for Authors) or contact the editorial office at ocr\_journal@usp.br.

21 **Please note that whilst this template provides a preview of the typeset manuscript for submission,**  
22 **it will not necessarily be exactly the final publication layout.**

## 23 INTRODUCTION

24 The introduction should be concise and place the manuscript in broader context. The text should present  
25 the current state of the knowledge in the topic related to the research, sharing the baseline information and  
26 citing key and relevant publications. The introduction should outline the significance and purpose of the work  
27 and clearly describe specific hypotheses being tested, in the last paragraph(s). Authors are free to describe  
28 their objective(s) as one or more hypothesis to be tested, or as a question to be answered, or even as an  
29 interesting/important environmental feature/phenomenon to be described.

30 The Introduction must be straight to the point, and preferably without subheadings. Authors should keep  
31 in mind that the introduction must be comprehensible to scientists from other research areas unrelated to the  
32 topic of the manuscript. Lines should be numbered in the document, starting from the first paragraph of the  
33 Introduction, as shown in this template.

## 34 METHODS

35 This section should be described with sufficient detail to allow others to replicate and build on published  
36 results. New methods and protocols should be described in detail while well-established methods can be  
37 briefly described and appropriately cited. We strongly recommend that authors reference the study/survey in  
38 time and space, if applicable. Authors should describe the main characteristics of the surveyed area and/or  
39 the experimental design. The description of data analyses is strongly recommended. The name and version  
40 of any relevant software or computer code relevant to the study should be cited or made available. Include  
41 any pre-registration codes. Research permits should be placed in this section whenever necessary.

## 42 RESULTS

43 This section must address the main results gathered from the sampling procedures, survey design and/or  
44 experimental work described in the Methods section.

## 45 SUBHEADINGS

46 Authors are free to use specific subheadings to better share the most important results that support or reject  
47 their research hypothesis or that better describe the oceanographic features being treated in the manuscript.

48 The information in the Results section should follow the same logical presentation provided in the Methods  
 49 section. Tables and figures can be used to summarize or illustrate the results. Additional data (large tables,  
 50 extra figures, images, videos, etc.) can be shared as Supplementary Material in case the manuscript is  
 51 accepted. Please correctly identify such material upon submission.

52 You can use `\section{...}`, `\subsection{...}` commands to add more sections and subsections to  
 53 your manuscript. Further sectional levels are provided by `\subsubsection`, `\paragraph` and `\subparagraph`.

54 **EQUATIONS**

55 Equations are one of the main points of using L<sup>A</sup>T<sub>E</sub>X. Here are some nonsense examples:

56 Let  $X_1, X_2, \dots, X_n$  be a sequence of independent and identically distributed random variables with  
 57  $E[X_i] = \mu$  and  $\text{Var}[X_i] = \sigma^2 < \infty$ , and let

58 
$$S_n = \frac{X_1 + X_2 + \dots + X_n}{n} = \frac{1}{n} \sum_i^n X_i \tag{1}$$

59 denote their mean. Then as  $n$  approaches infinity, the random variables  $\sqrt{n}(S_n - \mu)$  converge in distribution  
 60 to a normal  $\mathcal{N}(0, \sigma^2)$ .

61 
$$S_n = \frac{X_1+X_2+\dots+X_n}{n} \frac{X_1+X_2+\dots+X_n}{n} \frac{X_1+X_2+\dots+X_n}{n}$$
  
 62 
$$\frac{X_1+X_2+\dots+X_n}{n} \frac{X_1+X_2+\dots+X_n}{n} \frac{X_1+X_2+\dots+X_n}{n}$$
  
 63 
$$\frac{X_1+X_2+\dots+X_n}{n} \tag{2}$$

64 Here, have some more math:

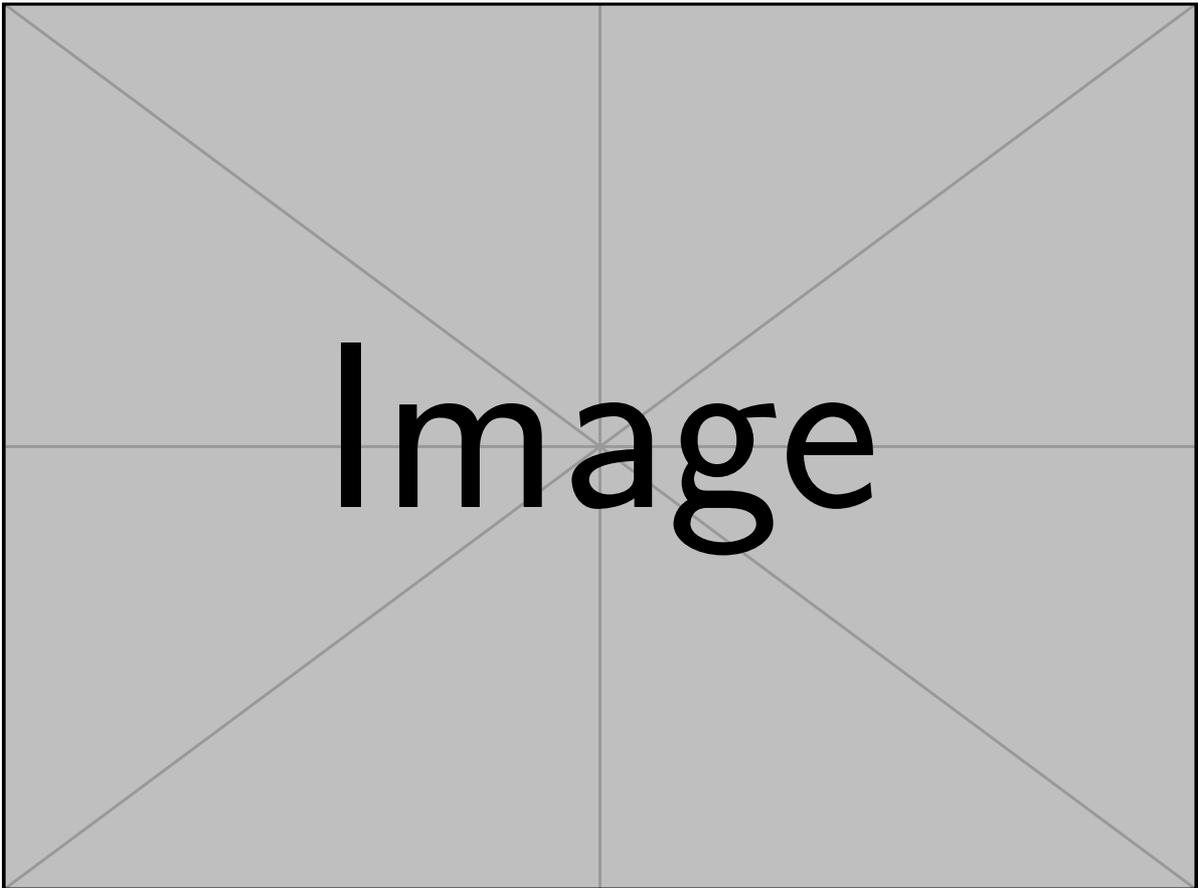

65 
$$\vec{\nabla} \int_0^\infty \vec{F}_i(\underbrace{\kappa, \sigma, \varsigma, \zeta}_{\text{true dimens.}}) dt = \oint_0^\infty e^{-\frac{2\pi}{\lambda}} \vec{\nabla} \left( \frac{\partial^2 \psi}{\partial t^2} \right) dr_\perp$$

66 This last unnumbered formula has nothing to do with Formula 1 by Reynaud LeBron.

67 **PREPARING FIGURES AND TABLES**

68 Figures and graphics at a sufficiently high resolution (minimum 1000 pixels width/height, or a resolution of  
 69 300 dpi) can be uploaded in a proper field in the submission platform. Make sure figures have sufficient pixel  
 70 definition before submission. Common formats are accepted; however, PNG, JPEG and EPS are preferred.  
 71 Authors are encouraged to prepare figures in color (RGB at 8-bits per channel).

72 The text within the figures and graphics must be in a font size large enough to be perfectly legible even  
 73 after a figure is reduced to fit the journal's page format. Ocean and Coastal Research can publish multimedia

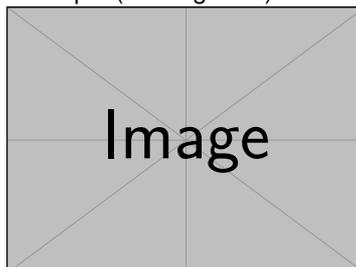

**Figure 1.** An example figure

74 files in articles or as supplementary materials. Please contact the editorial office for further information.

75 All Figures and Tables should have a self-explanatory caption. All table columns should have an explana-  
 76 tory heading. Further direction on Figures and Tables are detailed below .

77 In  $\text{\LaTeX}$ , figures and tables can be added with the usual `figure` and `table` environments, e.g.: Figure  
 78 1 and Table 1. Use `figure*` and `table*` if you need a two-column wide figure or table, as in Figure 3 and  
 79 Table 2. **We do not recommend**, but you can force a figure or table to appear at a specific text location with  
 80 `figurehere` and `tablehere` as in this example (see Figure 2).

81

**Table 1.** An example table.

Item	Quantity	Notes
Widgets	42	Over-supplied*
Gadgets	13	Under-supplied

This is a table note.  
 \*Another note.

**Figure 2.** An example figurehere.

**82 DISCUSSION**

83 The Discussion must start with a statement of main findings, preferably in one sentence, without repeating  
 84 the results.

85 The authors must then indicate the strengths and weaknesses of their results, in perspective with other  
 86 studies, and address the meaning of their findings without entering into speculative or circular reasoning.  
 87 Unanswered questions and future research directions may also be mentioned.

88 Quote tables and figures only when it is essential to draw the reader’s attention to one or more important  
 89 results.

**90 SUBHEADINGS**

91 Authors are free to use specific and useful subheadings according to their manuscript requirements to better  
 92 discuss the results.

**93 CONCLUSION**

94 This section is not mandatory but can be added to stress the main findings and future directions of the  
 95 research, usually within one or two paragraphs. This section must have a strong link to the main objectives,  
 96 questions or hypotheses. Avoid sentences such as "in conclusion ..." or "in summary...". Use the section to  
 97 highlight the value of your research and position your findings within a large context.

**98 ACKNOWLEDGMENTS**

99 Acknowledgments must be brief, straight to the point. Funding agencies and other funding sources must be  
 100 disclosed, with their respective grant number(s) if necessary. Keep the original names and acronyms of the  
 101 native language of institutions and sponsors.

## 102 AUTHOR CONTRIBUTION

103 **Ocean and Coastal Research** follows the **CRedit** criteria for authorship role designation. All co-authors  
104 must have at least (1) actively participated in the discussion of results, and (2) reviewed and approved the  
105 final version of the manuscript. Please select the role(s) for each author as expressed on the CRediT website  
106 at <https://casrai.org/credit/> and inform them in this section, using author initials, followed by the respective  
107 role(s). For example:

108 **F.L.** : Conceptualization; Investigation; Writing – original draft; Writing – review & editing;

109 **S.L.** : Methodology; Software; Formal Analysis; Investigation; Writing – review & editing;

110 **T.N.** : Data Curation; Software; Writing initial draft.

111 **F.N.** : Supervision; Resources; Project Administration; Funding Acquisition; Writing – review & editing.

## 112 CITATIONS AND REFERENCES

113 Ocean and Coastal Research follows the Harvard style of literature referencing. For speeding up the  
114 reviewing and the publishing processes, we strongly suggest the authors to use the ‘Ocean and Coastal  
115 Research’ BiB<sub>T</sub>E<sub>X</sub> style (`ocr.bst`) available for download.

116 It is the responsibility of the authors to double check the list of references and their quotations in the main  
117 text. Preparing the references using appropriate software will assist in avoiding typing mistakes, duplicated  
118 references and formatting issues. Citations and References in Supplementary files are permitted provided  
119 that they also appear in the main text and in the reference list. Citations in the main text must include the  
120 author’s names and year of publication, following the ‘Ocean and Coastal Research’ style. References to  
121 thesis, dissertations and reports are allowed as long as a valid and active URL pointing to the full text is  
122 included, along with the date of access.

123 Use the `\cite` command for parenthetical citations, and `\citeasnoun` command for text citations (when  
124 using `alpha-refs`). This is a citation: (Fan & Peng 2004) and here are two more (Cox 1972, Heard et al. 2006).  
125 This is a citation: (Fan & Peng 2004) and here is another one: Heard et al. (2006). The resulting bibliography  
126 is as follows (and in the real case should be moved to the end of the `.tex` file:

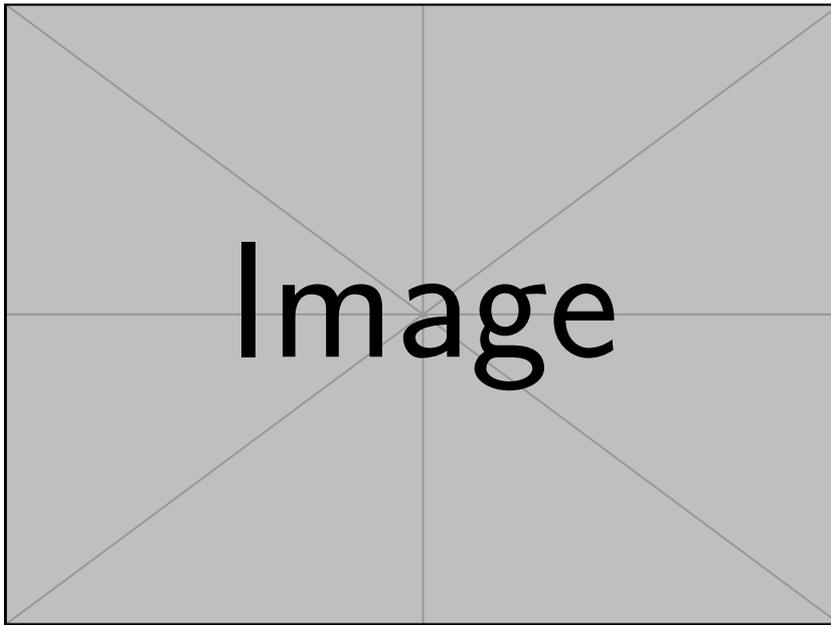

## 127 L<sup>A</sup>T<sub>E</sub>X-SPECIFIC EXAMPLES

128 This is a quote, if you ever want to use one.

129 • This is a bullet list.

130 • Another point.

131 • A third point.

**Figure 3.** An example of a wide figure.

132 i. This is a numbered list.

133 ii. Another point.

134 iii. A third point.

135 This<sup>1</sup> is a footnote.

136 **THIS IS A 2ND LEVEL HEADING**

137 ***This is a 3rd level heading***

138 Use `\subsubsection` to get a 3rd level heading.

139 *This is a 4th level heading.* Use `\paragraph` to get a 4th level heading.

140 THIS IS A 5TH LEVEL HEADING. Use `\subparagraph` to get a 5th level heading.
