

Template for preparing your Brief Report submission to PNAS using Overleaf

Author One^{a,c,1}, Author Two^{b,1,2}, and Author Three^a

^aAffiliation One; ^bAffiliation Two; ^cAffiliation Three

This manuscript was compiled on August 26, 2021

1 Please provide an abstract of no more than 250 words in a single
2 paragraph. Abstracts should explain to the general reader the major
3 contributions of the article. References in the abstract must be cited
4 in full within the abstract itself and cited in the text.

Keyword 1 | Keyword 2 | Keyword 3 | ...

1 This PNAS journal template is provided to help you write
2 your work in the correct journal format. Instructions for
3 use are provided below.

4 Note: please start your introduction without including the
5 word “Introduction” as a section heading (except for math arti-
6 cles in the Physical Sciences section); this heading is implied
7 in the first paragraphs.

8 Guide to using this template on Overleaf

9 Please note that whilst this template provides a preview of the
10 typeset manuscript for submission, to help in this preparation,
11 it will not necessarily be the final publication layout. For
12 more detailed information please see the [PNAS Information](#)
13 [for Authors](#).

14 If you have a question while using this template on Overleaf,
15 please use the help menu (“?”) on the top bar to search for [help](#)
16 [and tutorials](#). You can also [contact the Overleaf support team](#)
17 at any time with specific questions about your manuscript or
18 feedback on the template.

19 **Author Affiliations.** Include department, institution, and com-
20 plete address, with the ZIP/postal code, for each author. Use
21 lower case letters to match authors with institutions, as shown
22 in the example. PNAS strongly encourages authors to sup-
23 ply an [ORCID identifier](#) for each author. Individual authors
24 must link their ORCID account to their PNAS account at
25 [www.pnascentral.org](#). For proper authentication, authors must
26 provide their ORCID at submission and are not permitted to
27 add ORCIDs on proofs.

28 **Submitting Manuscripts.** All authors must submit their arti-
29 cles at [PNAScentral](#). If you are using Overleaf to write your
30 article, you can use the “Submit to PNAS” option in the top
31 bar of the editor window.

32 **Format.** Many authors find it useful to organize their
33 manuscripts with the following order of sections; title, au-
34 thor line and affiliations, keywords, abstract, introduction,
35 results, discussion, materials and methods, acknowledgments,
36 and references. Other orders and headings are permitted.

37 **Manuscript Length.** Brief Reports are limited to 3 pages, which
38 is approximately 1,600 words (including the manuscript text,
39 title page, abstract, and figure legends), and 15 references.

Fig. 1. Placeholder image of a frog with a long example legend to show justification setting.

Supporting information (SI) is limited to extended methods, 40
essential supporting datasets, and videos (no additional tables 41
or figures). 42

References. References should be cited in numerical order as 43
they appear in text; this will be done automatically via bibtex, 44
e.g. (1) and (2, 3). All references cited in the main text should 45
be included in the main manuscript file. 46

Data Archival. PNAS must be able to archive the data essential 47
to a published article. Where such archiving is not possible, 48
deposition of data in public databases, such as GenBank, Ar- 49
rayExpress, Protein Data Bank, Unidata, and others outlined 50
in the [Information for Authors](#), is acceptable. 51

Language-Editing Services. Prior to submission, authors who 52
believe their manuscripts would benefit from professional edit- 53
ing are encouraged to use a language-editing service (see list at 54
[www.pnas.org/page/authors/language-editing](#)). PNAS does 55
not take responsibility for or endorse these services, and their 56
use has no bearing on acceptance of a manuscript for publica- 57
tion. 58

Please provide details of author contributions here.

Please declare any competing interests here.

¹A.O.(Author One) contributed equally to this work with A.T. (Author Two) (remove if not applicable).

²To whom correspondence should be addressed. E-mail: author.twoemail.com

Fig. 2. This legend would be placed at the side of the figure, rather than below it.

59 **Digital Figures.** EPS, high-resolution PDF, and PowerPoint
 60 are preferred formats for figures that will be used in the main
 61 manuscript. Authors may submit PRC or U3D files for 3D
 62 images; these must be accompanied by 2D representations
 63 in TIFF, EPS, or high-resolution PDF format. Color images
 64 must be in RGB (red, green, blue) mode. Include the font
 65 files for any text.

66 Images must be provided at final size, preferably 1 column
 67 width (8.7cm). Figures wider than 1 column should be sized
 68 to 11.4cm or 17.8cm wide. Numbers, letters, and symbols
 69 should be no smaller than 6 points (2mm) and no larger than
 70 12 points (6mm) after reduction and must be consistent.

71 Figures and tables should be labelled and referenced in the
 72 standard way using the `\label{}` and `\ref{}` commands.

73 Figure 1 shows an example of how to insert a column-wide
 74 figure. To insert a figure wider than one column, please use
 75 the `\begin{figure*}... \end{figure*}` environment. Fig-
 76 ures wider than one column should be sized to 11.4 cm or 17.8
 77 cm wide. Use `\begin{SCfigure*}... \end{SCfigure*}` for a
 78 wide figure with side legends.

79 **Tables.** Tables should be included in the main manuscript file
 80 and should not be uploaded separately.

81 **Single column equations.** Authors may use 1- or 2-column
 82 equations in their article, according to their preference.

83 To allow an equation to span both columns, use the
 84 `\begin{figure*}... \end{figure*}` environment mentioned
 85 above for figures.

86 Note that the use of the `widetext` environment for equa-
 87 tions is not recommended, and should not be used.

Table 1. Comparison of the fitted potential energy surfaces and ab initio benchmark electronic energy calculations

Species	CBS	CV	G3
1. Acetaldehyde	0.0	0.0	0.0
2. Vinyl alcohol	9.1	9.6	13.5
3. Hydroxyethylidene	50.8	51.2	54.0

nomenclature for the TSs refers to the numbered species in the table.

Supporting Information (SI). Authors are limited to the follow- 88
 89 ing types of SI: extended methods, datasets, videos, and 3D
 90 figures. Extended discussion is not permitted.

SI Appendix. Supply extended materials and methods infor- 91
 92 mation in a separate SI Appendix PDF file. Include SI movie
 93 legends. SI will be published as provided by the authors; it
 94 will not be edited or composed. Supplementary figures and
 95 tables are not allowed.

SI Datasets. Supply .xlsx, .csv, .txt, .rtf, or .pdf files. This file 96
 97 type will be published in raw format and will not be edited or
 98 composed.

SI Movies. Supply Audio Video Interleave (avi), Quicktime 99
 100 (mov), Windows Media (wmv), animated GIF (gif), or MPEG
 101 files and include a brief legend for each movie in the main
 102 manuscript file. All movies should be submitted at the desired
 103 reproduction size and length. Movies should be no more than
 104 10 MB in size.

$$\begin{aligned}(x + y)^3 &= (x + y)(x + y)^2 \\ &= (x + y)(x^2 + 2xy + y^2) \\ &= x^3 + 3x^2y + 3xy^2 + y^3.\end{aligned}\tag{1}$$

105 **3D Figures.** Supply a composable U3D or PRC file so that it
106 may be edited and composed. Authors may submit a PDF file
107 but please note it will be published in raw format and will not
108 be edited or composed.

109 **Materials and Methods**

110 Please describe your materials and methods here. This can be more
111 than one paragraph, and may contain subsections and equations as
112 required.

113 **Subsection for Method.** Example text for subsection.

114 **ACKNOWLEDGMENTS.** Please include your acknowledgments
115 here, set in a single paragraph. Please do not include any acknowl-
116 edgments in the Supporting Information, or anywhere else in the
117 manuscript.
